Trans. of Teploenergetika (USSR) 1956 [v. 3] no. 3,
p. 39-47.

An analytical expression for the efficiency of the
regenerative cycle of the steam-turbine plants with
resuperheating is obtained for an ideal cycle, taking
into account the internal relative efficiencies. The
relation between the optimum temperature of the
regenerative heating in the low-pressure part of the
turbine and the cycle parameters is considered. The
condition for the thermodynamically most suitable
initial resuperheating temperature is given. (Author)
